LAZAR PESIC

JUNIOR SOFTWARE & DATA ENGINEER

Belgrade, Serbia · lazarpesic.vercel.app · lp2017230143@gmail.com
+381 69 300 6690 · github.com/PesicLazar · LinkedIn: Lazar Pesic

Software and Data Engineering graduate with Python data analysis and TensorFlow projects, plus JavaScript game development and an Angular graduation thesis. Built data workflows, browser automation, and interactive applications.

SKILLS

Programming: Python, JavaScript, TypeScript, C

Data & ML: Pandas, NumPy, TensorFlow, Keras, Matplotlib; SQL (MySQL) and NoSQL (MongoDB) coursework

Web & tools: Angular, Node.js, Express.js, REST APIs, Git, GitHub, Docker, Linux, Google Apps Script, Puppeteer

Other: Agile (Scrum), responsive design, unit testing, Google Analytics · Driving license: B

PROFESSIONAL EXPERIENCE

Technical Support - Airalo (AirGSM Pte. Ltd.), Belgrade | Jun 2025 - Feb 2026

- Provided technical support for eSIM and mobile networks in Hebrew and English.
- Diagnosed device compatibility, iOS/Android configuration, activation, and connectivity issues using internal tools.
- Documented technical cases, handled confidential customer data, and identified recurring issues for process improvement.

Freelance Web Developer | Jul 2019 - Dec 2020

- Designed and developed custom websites and web applications for small businesses and local clients.

Site Creator & Data Analyst - Lee House Restaurant, Ho Chi Minh City | Jun 2018 - Nov 2018

- Created and managed an Angular website, employee email accounts, and business social media pages.
- Integrated Google Maps and Google Business analytics to monitor user behavior and reviews.
- Supported customers during day shifts and designed and distributed promotional flyers.

EDUCATION

B.Sc. in Software and Data Engineering - Singidunum University, Belgrade

- GPA: 7.31 / 10 · Focus: machine learning, data analysis, algorithms, database systems, web development.
- Database coursework: relational data and SQL with MySQL; NoSQL with MongoDB.

Theoretical and Experimental Physics - Faculty of Physics, University of Belgrade

- Coursework in physics labs, astrophysics, measurement processing, and chemistry; used MATLAB to analyze experiments.

SELECTED PROJECTS

Personal CV Site - graduation thesis (Angular 18, TypeScript, Node.js)

Built a responsive single-page portfolio with Angular Material, routing, project filters, and a validated contact form.

Designed a serverless submission workflow using Google Forms, Apps Script, and Sheets; wrote a Node.js/Puppeteer automation to read submissions via the Sheets API and send scheduled WhatsApp summaries.

Music Genre Classification CNN (Python, TensorFlow/Keras)

Trained a CNN to classify music genres from image data, reaching approximately 80% test accuracy. Used preprocessing, augmentation, confusion matrices, and classification metrics.

Data Science Salary Prediction (Python, TensorFlow/Keras)

Built and trained prediction models for a Mining of Massive Datasets project using the high-level Keras API.

Kaggle Health Dataset Analysis (Python)

Cleaned, aggregated, and visualized data with Pandas and Matplotlib in a Jupyter Notebook.

Arena Mini Game (JavaScript) - playable on portfolio site

Built a fighter-betting mini game: players select a fighter and wager in-game money; a formula with a random component determines the winner.

Minecraft Bedrock Add-on (JavaScript, JSON) - interview exercise

Created custom resource and behavior packs with scripted player playtime tracking, an in-air dash, and a debug tablet UI for speed and game-mode controls; added custom items and blocks.

E-Commerce Web App (Angular)

Built an authenticated frontend with Angular and Firebase, including cart logic, routing, and responsive layouts.

Connect-4 Game (C)

Developed a command-line game applying algorithmic thinking and memory management.
